ProTerra Lighting Completes Another Successful Installation

Syl Apps Community Centre in Paris, Ontario, updated their indoor soccer pad lighting. They replaced 24 of their 400 watt metal halide lights with 24 ProTerra Lighting 122 watt LED high bay lights and the results are impressive.

Even though power consumption has been reduced by 6,720 watts, you can clearly see an incredible improvement in the quality and dispersion of light in the “AFTER” compared to the “BEFORE” photo...

What can't be seen are the environmental benefits and financial savings Syl Apps Community Centre is now achieving after installing the ProTerra Lighting high bay LED lights.

At ProTerra...Lighting is not just our product – it's our passion!
